Email Address: gillgoda@fltg.net
Title: Gill's HVAC
Organization: owner
County: Ontario

Comment: I would like to see most of NYS's energy come from wind, solar, and energy savings from geothermal applications. I don't want any energy coming from coal fired power plants, energy recovery incineration or gasification of garbage. More effort needs to be made to recycle. **DO NOT ALLOW LANDFILL COMPANIES TO BE IN THE BUSINESS OF RECYCLING.** Combined companies like Casella have conflict of interest. They would rather landfill recyclables or incinerate them. I know of a maker of plastic boards in Port Gibson, NY who wants to buy recyclables from Casella Waste Management at Flint, NY and Casella won't sell to him. He has to buy recyclable plastic from Canada. Casella publically said people don't recycle more than 10! % of the waste stream. People should recycle at least 50% then incineration wouldn't have enough burnables to be profitable. Our society needs to consume less resources and recycling is the way to do it. Stop polluting the air, water, and ground. I am concerned that natural gas extraction techniques will pollute ground water. Don't put anything but water down the drill holes. The 'pebble' nuclear technology looks ok for a transitional power source to avoid further global warming.
