

## The Energy Planning Board

I am writing to urge The Board to  
push alternative + renewable energy.

Island needs offshore wind as part  
of our energy mix, not more promises to  
put into it. L.I. also needs substantial,  
large scale solar projects which will help  
meet summer peak demand. I for one  
would put solar panels on my own house,  
- the cost is prohibitive. Some projections  
would take ten years to re-coup my invest-  
ment. Thank you for your time and efforts.
